Mr. Harold W. Emrick  
The Hoover Company  
North Canton, Ohio 44720

August 22, 1979

Dear Mr. Emrick:

This Agency has reviewed your August 13, 1979 letter. In that letter a chemical analysis of your WWTP sludge was enclosed. Earlier conversations with you indicated that approximately 350-400 CY of this waste are generated annually. You described the material as being thixotropic (when the material is agitated, it's structural rigidity is reduced and it becomes less viscous and cohesive). Previously this material had been disposed at one of SCA's landfills in Stark County.

This Office feels that this sludge should be mixed with a dry granular solid at the Hoover site in order that more structural integrity of the waste may result. The sludge could then be transported to a landfill which meets the following requirements:

- 1) the landfill must have a history of good operation;
- 2) the landfill must be at least 1,000 feet from any water supply wells or have a waiver to operate within that distance;
- 3) the landfill must have either secured a Permit to Install to dispose of industrial sludges or be willing to submit an application for such disposal;
- 4) be considered acceptable by the local Health Department and this Office for sludge disposal;
- 5) the site must have groundwater monitoring facilities.

By contacting this Office and the local Health Department, you may be informed which facilities meet the above criteria.

Sincerely yours,

Lynn A. Clark, P.E.  
Section Chief  
Office of Land Pollution Control  
Northeast District Office
